EXPLAINING THE PROCESS

Client makes a recycling order using uRecycle Client Portal. All the orders and invoices will be handled via the Client Portal.

Client makes the battery risk assessment (safe/not safe) which determines the container specifications and transportation method.

Client will tag and pack the battery to the container according to the uTrack standards using the Client Portal.

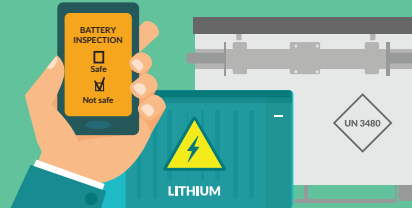

Batteries are discharged and dismantled. The tag will be removed from the battery and all the information will be recorded to the Client Portal.

REPORTS & INVOICES

Client will receive a container if needed. Client will check the container according to uTrack guidelines and reports to the Client Portal.

Containers will be transported to a warehouse where they are inspected before recycling. Client can follow-up the transport in real-time.

Client can get all the data and reports of the recycling process from the Client Portal.
